| 2.0 Process Transaction     | <b>**Account Updates**</b>     | Core Banking System       |  |
| 2.0 Process Transaction     | <b>**Dashboard**</b>           | Customer                  |  |
| 2.0 Process Transaction     | <b>**Transaction Result**</b>  | Customer                  |  |
| 2.0 Process Transaction     | <b>**Cash Status**</b>         | Customer                  |  |
| 2.0 Process Transaction     | <b>**Receipt**</b>             | Customer                  |  |
| D3 ATM Terminal Data        | <b>**Terminal Data**</b>       | 3.0 Monitor ATM Resources |  |
| D4 Cassette Inventory       | <b>**Cash Data**</b>           | 3.0 Monitor ATM Resources |  |
| D5 Maintenance Records      | <b>**Maintenance Data**</b>    | 3.0 Monitor ATM Resources |  |
| 3.0 Monitor ATM Resources   | <b>**Telemetry**</b>           | Fleet Operations Center   |  |
| 3.0 Monitor ATM Resources   | <b>**Cash Status**</b>         | Fleet Operations Center   |  |
| 3.0 Monitor ATM Resources   | <b>**Maintenance Status**</b>  | Fleet Operations Center   |  |
| Fleet Operations Center     | <b>**Dispatch Status**</b>     | 3.0 Monitor ATM Resources |  |
| Fleet Operations Center     | <b>**Maintenance Status**</b>  | 3.0 Monitor ATM Resources |  |
| Customer                    | <b>**Security Request**</b>    | 4.0 Protect ATM Session   |  |
| 4.0 Protect ATM Session     | <b>**Security Status**</b>     | Customer                  |  |
| 4.0 Protect ATM Session     | <b>**Security Data**</b>       | D3 ATM Terminal Data      |  |

**### Final process names**

**\*\*1.0 Authenticate User\*\***

**\*\*2.0 Process Transaction\*\***

**\*\*3.0 Monitor ATM Resources\*\***

**\*\*4.0 Protect ATM Session\*\***

**### Final prepared data-flow vocabulary**

**\*\*Biometric Data • Biometric Profile • Authentication • User Context • Gesture Input • Transaction Request • Account Data • Authorization • Transaction Data • Account Updates • Dashboard • Transaction Result • Cash Status • Receipt • Terminal Data • Cash Data • Maintenance Data • Telemetry • Maintenance Status • Dispatch Status • Security Request • Security Status • Security Data\*\***

This is now the **\*\*finalized DFD vocabulary and structure\*\*** for our Enterprise-Kiosk Vanguard case, while retaining the original DFD design.

---

## **ERD Ms Access**

---

Opo mahal. We'll make this specifically for **\*\*Microsoft Access SQL\*\***, using your naming convention and all **\*\*9 tables\*\***, with the **\*\*PK/FK relationships\*\*** included.

One important Access detail: because some Access versions can be picky about executing multiple ``CREATE TABLE`` statements at once, **\*\*run each table statement separately first\*\***, then run each ``ALTER TABLE`` relationship statement. That avoids the naming/parser errors you're encountering.

## **## 1. Create `tblCustomers`**

Open **\*\*Create → Query Design → SQL View\*\***, paste this, then click **\*\*Run\*\***:

**```sql**

```
CREATE TABLE tblCustomers (
 numCustomerID AUTOINCREMENT CONSTRAINT PK_tblCustomers PRIMARY
KEY,
 txtFirstName TEXT(50),
 txtLastName TEXT(50),
 txtContactNumber TEXT(20),
 txtEmail TEXT(100),
 dteRegistrationDate DATETIME,
 txtStatus TEXT(20)
);
```
```

2. Create `tblBiometricTypes`

```sql

```
CREATE TABLE tblBiometricTypes (  
    numBiometricTypeID AUTOINCREMENT CONSTRAINT PK_tblBiometricTypes  
PRIMARY KEY,  
    txtBiometricTypeName TEXT(50),  
    txtDescription TEXT(255)  
);
```

3. Create `tblBiometricProfiles`

```sql

```
CREATE TABLE tblBiometricProfiles (
 numBiometricProfileID AUTOINCREMENT CONSTRAINT
 PK_tblBiometricProfiles PRIMARY KEY,
 numCustomerID LONG,
 numBiometricTypeID LONG,
 memBiometricTemplate LONGTEXT,
 dteEnrollmentDate DATETIME,
 txtStatus TEXT(20)
);
```

---

---

### **## 4. Create `tblAccounts`**

```sql

```
CREATE TABLE tblAccounts (  
    numAccountID AUTOINCREMENT CONSTRAINT PK_tblAccounts PRIMARY  
    KEY,  
    numCustomerID LONG,  
    txtAccountNumber TEXT(30),
```

```
txtAccountType TEXT(30),  
curCurrentBalance CURRENCY,  
txtAccountStatus TEXT(20),  
dteDateOpened DATETIME  
);  
---
```

5. Create `tblTransactionTypes`

```
```sql  
CREATE TABLE tblTransactionTypes (
 numTransactionTypeID AUTOINCREMENT CONSTRAINT
 PK_tblTransactionTypes PRIMARY KEY,
 txtTransactionTypeName TEXT(50),
 txtDescription TEXT(255)
);

```

**## 6. Create `tblATMTerminals`**

```
```sql  
CREATE TABLE tblATMTerminals (  
    numATMID AUTOINCREMENT CONSTRAINT PK_tblATMTerminals PRIMARY  
    KEY,
```

```
txtTerminalSerialNumber TEXT(50),  
txtLocation TEXT(150),  
txtStatus TEXT(20),  
dteInstallationDate DATETIME  
);  
---
```

7. Create `tblATMTransactions`

```
```sql  
CREATE TABLE tblATMTransactions (
 numTransactionID AUTOINCREMENT CONSTRAINT PK_tblATMTransactions
 PRIMARY KEY,
 numAccountID LONG,
 numATMID LONG,
 numTransactionTypeID LONG,
 curAmount CURRENCY,
 dteTransactionDateTime DATETIME,
 txtTransactionStatus TEXT(20),
 txtReceiptType TEXT(30)
);

```

## **## 8. Create `tblCassetteInventory`**

**```sql**

```
CREATE TABLE tblCassetteInventory (
 numCassetteID AUTOINCREMENT CONSTRAINT PK_tblCassetteInventory
 PRIMARY KEY,
 numATMID LONG,
 curDenomination CURRENCY,
 numCurrentQuantity LONG,
 numMaximumCapacity LONG,
 txtCassetteStatus TEXT(20),
 dteLastRefilledDate DATETIME
);
```

**```**

**---**

## **## 9. Create `tblMaintenanceRecords`**

**```sql**

```
CREATE TABLE tblMaintenanceRecords (
 numMaintenanceID AUTOINCREMENT CONSTRAINT
 PK_tblMaintenanceRecords PRIMARY KEY,
 numATMID LONG,
 txtMaintenanceType TEXT(50),
 dteMaintenanceDate DATETIME,
 memDescription LONGTEXT,
 txtTechnicianName TEXT(100),
```

```
txtMaintenanceStatus TEXT(20)
);
...
```

**# Now create the PK/FK relationships**

**After all \*\*9 tables have been successfully created\*\*, create the relationships.**

**### Relationship 1 — Customer → Biometric Profiles**

```
```sql
ALTER TABLE tblBiometricProfiles
ADD CONSTRAINT FK_BiometricProfiles_Customers
FOREIGN KEY (numCustomerID)
REFERENCES tblCustomers (numCustomerID);
...
```

Relationship 2 — Biometric Type → Biometric Profiles

```
```sql
ALTER TABLE tblBiometricProfiles
ADD CONSTRAINT FK_BiometricProfiles_BiometricTypes
FOREIGN KEY (numBiometricTypeID)
REFERENCES tblBiometricTypes (numBiometricTypeID);
...
```

**### Relationship 3 — Customer → Accounts**

```
```sql
```

```
ALTER TABLE tblAccounts  
ADD CONSTRAINT FK_Accounts_Customers  
FOREIGN KEY (numCustomerID)  
REFERENCES tblCustomers (numCustomerID);
```

```
```
```

**### Relationship 4 — Account → ATM Transactions**

```
```sql
```

```
ALTER TABLE tblATMTransactions  
ADD CONSTRAINT FK_ATMTransactions_Accounts  
FOREIGN KEY (numAccountID)  
REFERENCES tblAccounts (numAccountID);
```

```
```
```

**### Relationship 5 — Transaction Type → ATM Transactions**

```
```sql
```

```
ALTER TABLE tblATMTransactions  
ADD CONSTRAINT FK_ATMTransactions_TransactionTypes  
FOREIGN KEY (numTransactionTypeID)  
REFERENCES tblTransactionTypes (numTransactionTypeID);
```

```
```
```

**### Relationship 6 — ATM Terminal → ATM Transactions**

```
```sql
```

```
ALTER TABLE tblATMTransactions  
ADD CONSTRAINT FK_ATMTransactions_ATMTerminals  
FOREIGN KEY (numATMID)  
REFERENCES tblATMTerminals (numATMID);
```

```
```
```

**### Relationship 7 — ATM Terminal → Cassette Inventory**

```
```sql
```

```
ALTER TABLE tblCassetteInventory  
ADD CONSTRAINT FK_CassetteInventory_ATMTerminals  
FOREIGN KEY (numATMID)  
REFERENCES tblATMTerminals (numATMID);
```

```
```
```

**### Relationship 8 — ATM Terminal → Maintenance Records**

```
```sql
```

```
ALTER TABLE tblMaintenanceRecords  
ADD CONSTRAINT FK_MaintenanceRecords_ATMTerminals  
FOREIGN KEY (numATMID)  
REFERENCES tblATMTerminals (numATMID);
```

```
```
```

**## Final relationship structure**

```
```text
```

tblCustomers

```
```
```

**### One thing to be careful about, mahal**

**For these foreign-key fields:**

```
```text
```

numCustomerID

numBiometricTypeID

numAccountID

numATMID

numTransactionTypeID

```
```
```

**the \*\*data type is `LONG` (Number)\*\*, not AutoNumber.**

**Only the corresponding primary keys are `AUTOINCREMENT`:**

```
```text
```

numCustomerID → AutoNumber

numBiometricTypeID → AutoNumber

numBiometricProfileID → AutoNumber

numAccountID → AutoNumber

numTransactionTypeID → AutoNumber

numATMID → AutoNumber

numTransactionID → AutoNumber

numCassetteID → AutoNumber

numMaintenanceID → AutoNumber

...

That distinction is important for Access relationships.

****Also, don't execute all 17 SQL blocks together.** Create the 9 tables first, one query at a time, and only after all tables exist, execute the 8 relationship queries. This is the safest way to avoid another Access SQL error.**

Enterprise-Kiosk Vanguard

Final Data Flow Diagram

Shape / Symbol Legend

Symbol	Meaning	Naming Rule	
-----	-----	-----	
`*ENTITY*`	External Entity	Noun / external system or user	
`*PROCESS*`	Process	**Verb / action**	
`*DATA FLOW*`	Data Flow	Data being transferred	
`*DATA STORE*`	Data Store	Stored information	

DFD LEVEL 0 — CONTEXT DIAGRAM

Main Process

`\*PROCESS\*` **PROVIDE ATM SERVICES**

External Entities

* `\*ENTITY\*` **CUSTOMER**

* `\*ENTITY\*` **CORE BANKING SYSTEM**

* `\*ENTITY\*` **FLEET OPERATIONS CENTER**

Data Flows

CUSTOMER → PROVIDE ATM SERVICES

* `\*DATA FLOW\*` **Biometric Data**

* `\*DATA FLOW\*` **Gesture Input**

* `\*DATA FLOW\*` **Transaction Request**

* `\*DATA FLOW\*` **Security Request**

PROVIDE ATM SERVICES → CUSTOMER

* `\*DATA FLOW\*` **Authentication**

* `\*DATA FLOW\*` **Dashboard**

* `\*DATA FLOW\*` **Transaction Result**

* `\*DATA FLOW\*` **Cash Status**

* `\*DATA FLOW\*` **Receipt**

CORE BANKING SYSTEM → PROVIDE ATM SERVICES

* `\*DATA FLOW\*` **Account Data**

* `\*DATA FLOW\*` **Authorization**

PROVIDE ATM SERVICES → CORE BANKING SYSTEM

* `\*DATA FLOW\*` **Transaction Data**

* `\*DATA FLOW\*` **Account Updates**

PROVIDE ATM SERVICES → FLEET OPERATIONS CENTER

* `\*DATA FLOW\*` **Telemetry**

* `\*DATA FLOW\*` **Cash Status**

* `\*DATA FLOW\*` **Maintenance Status**

FLEET OPERATIONS CENTER → PROVIDE ATM SERVICES

* `\*DATA FLOW\*` **Dispatch Status**

* `\*DATA FLOW\*` **Maintenance Status**

DFD LEVEL 1 — SYSTEM DECOMPOSITION

The Level 0 process **PROVIDE ATM SERVICES** is decomposed into four processes:

`1.0 Authenticate User`

`2.0 Process Transaction`

`3.0 Monitor ATM Resources`

`4.0 Protect ATM Session`

1.0 AUTHENTICATE USER

CUSTOMER → 1.0 Authenticate User

`\*DATA FLOW\*` **Biometric Data**

1.0 Authenticate User ↔ D1 Customer / Biometric Data

`\*DATA FLOW\*` **Biometric Profile**

1.0 Authenticate User → CUSTOMER

`\*DATA FLOW\*` **Authentication**

1.0 Authenticate User → 2.0 Process Transaction

`\*DATA FLOW\*` **User Context**

Data Store

`\*DATA STORE\*` **D1 Customer / Biometric Data**

2.0 PROCESS TRANSACTION

CUSTOMER → 2.0 Process Transaction

`\*DATA FLOW\*` **Gesture Input**

`\*DATA FLOW\*` **Transaction Request**

D2 Account / Transaction Data ↔ 2.0 Process Transaction

`\*DATA FLOW\*` **Account Data**

CORE BANKING SYSTEM → 2.0 Process Transaction

`\*DATA FLOW\*` **Account Data**

`\*DATA FLOW\*` **Authorization**

2.0 Process Transaction → CORE BANKING SYSTEM

`\*DATA FLOW\*` **Transaction Data**

`\*DATA FLOW\*` **Account Updates**

2.0 Process Transaction → CUSTOMER

`\*DATA FLOW\*` **Dashboard**

`\*DATA FLOW\*` **Transaction Result**

`\*DATA FLOW\*` **Cash Status**

`\*DATA FLOW\*` **Receipt**

Data Store

`\*DATA STORE\*` **D2 Account / Transaction Data**

3.0 MONITOR ATM RESOURCES

D3 ATM Terminal Data → 3.0 Monitor ATM Resources

`\*DATA FLOW\*` **Terminal Data**

D4 Cassette Inventory → 3.0 Monitor ATM Resources

`\*DATA FLOW\*` **Cash Data**

D5 Maintenance Records → 3.0 Monitor ATM Resources

`\*DATA FLOW\*` **Maintenance Data**

3.0 Monitor ATM Resources → FLEET OPERATIONS CENTER

`\*DATA FLOW\*` **Telemetry**

`\*DATA FLOW\*` **Cash Status**

`\*DATA FLOW\*` **Maintenance Status**

FLEET OPERATIONS CENTER → 3.0 Monitor ATM Resources

`\*DATA FLOW\*` **Dispatch Status**

`\*DATA FLOW\*` **Maintenance Status**

Data Stores

`\*DATA STORE\*` **D3 ATM Terminal Data**

`\*DATA STORE\*` **D4 Cassette Inventory**

`\*DATA STORE\*` **D5 Maintenance Records**

4.0 PROTECT ATM SESSION

CUSTOMER → 4.0 Protect ATM Session

`\*DATA FLOW\*` **Security Request**

4.0 Protect ATM Session → CUSTOMER

`\*DATA FLOW\*` **Security Status**

4.0 Protect ATM Session → D3 ATM Terminal Data

`\*DATA FLOW\*` **Security Data**

Final Flow Summary

For our actual diagrams.net drawing, the complete structure is:

```text

...

And Level 1:

```text

...

The important final rule

****We are not adding new processes or changing the original system logic.**** The simplification is only in the ****data-flow names**** so the actual diagram is readable.

So our finalized process structure remains:

****Level 0:****

`PROVIDE ATM SERVICES`

****Level 1:****

`1.0 Authenticate User` → `2.0 Process Transaction` → `3.0 Monitor ATM Resources` →
`4.0 Protect ATM Session`

with ****D1–D5**** as our established data stores.

Search Key words:
